

Common Host Plants of Asian Citrus Psyllid

Citrus and closely related plants in the Rutaceae family

For a more detailed list see 'Field ID guide to citrus relative hosts of Asian citrus psyllid and Huanglongbing' by T. Siebert, R. Krueger, D. Karp and T. Kahn, available from the Citrus research Board for \$5. (559-738-0246, info@citrusresearch.org)

Plants that are obviously citrus (oranges, limes, lemons, mandarins, grapefruit, kumquats)

Citrus relatives that don't look like citrus (the two most commonly found in California are shown below).

Orange Jasmine or Jessamine
Grown as an ornamental bush or hedge

Indian curry leaf
Leaves are used in cooking
